CRITERION-VII: INSTITUTIONAL VALUES AND BEST PRACTICES

7.1.3 Measures taken for proper treatment, disposal and recycling procedures and Supporting document for beyond the campus environmental promotions with Geo-tagged photos.

7.1.3 Measures taken for proper treatment, disposal and recycling procedures.

A separate system has been created for the management of degradable and non-degradable waste in the college. To collect wet waste and dry waste, dustbins have been kept in various places of the college like main office, canteen, library, girls' hostel etc. is done The college has entered into an MOU with Ashti Nagar Panchayat and through this MOU, wet and dry waste is managed. Ashti Nagar Panchayat's waste collection vehicle comes to the college from time to time and takes the wet and dry waste from the college and disposes it scientifically.

Also vermicomposting project has been implemented in the college. The mulch of trees in various places in the college is collected and made into vermicompost. Along with this, the paper falling in the college is also used for vermicomposting. This vermicompost is used as fertilizer for the trees in the college premises. Plastics are banned in the college and even if empty water bottles and other plastic items are found in the college, all those plastic items are given to the respective recycling agency.

The college has entered into an MOU with Perfect E-Waste Recycles, an agency at Chhatrapati Sambhajnagar, for the management of e-waste, and the said company takes the collected e-waste from the college and recycles it from time to time. Also, the chemical water coming out of the laboratory in a hazardous form is collected through a shock pit. In this way degradable and non-degradable waste is managed in the college.

The water coming out of the RO (Reverse Osmosis) installed in the college is reused for tress. The water coming out of the RO (Reverse Osmosis) is stored in a tank and fed to the trees in the college premises through drip irrigation with the help of an electric motor. In this way, an attempt has been made to conserve water by reusing rainwater and water coming out of RO.

In HEI we have Green club and Environmental Conservation Committee, with the help of this various measures were organized for proper treatment, disposal and recycling procedures.

BEYOND THE CAMPUS ENVIRONMENTAL PROMOTIONAL ACTIVITIES

To promote environmental sustainability beyond the campus, Bhagwan Mahavidyalaya can engage in various outreach and promotional activities.

1. Community Clean-Up Drives

- **Objective:** Encourage students and community members to participate in cleaning public areas such as, Temple premises, roads, riversides, and markets.
- **Impact:** Increases awareness of waste management and pollution while improving the cleanliness of local areas.

2. Tree Plantation Programs

- **Objective:** Organize tree-planting events
- **Impact:** Increases green cover, enhances air quality, and raises awareness about reforestation and its benefits.

3. Water Conservation Awareness Campaigns

- **Objective:** Educate local farmers and residents on water-saving techniques like rainwater harvesting, drip irrigation, and wastewater recycling.
- **Impact:** Promotes sustainable water use, especially in water-scarce regions.

4. Environmental Education Programs

- **Objective:** Partner with local schools to integrate environmental education into their curriculum, emphasizing topics such as climate change, biodiversity, and conservation.
- **Impact:** Instills environmental values in younger generations and broadens the impact of eco-friendly practices.

5. Sustainable Agriculture Projects

- **Objective:** Engage with local farmers to promote sustainable agricultural practices like organic farming, agroforestry, and permaculture.
- **Impact:** Encourages eco-friendly farming methods, improving soil health and reducing chemical usage.

These activities can position the college as a leader in environmental stewardship, extending its impact beyond the campus and fostering a culture of sustainability in the surrounding community.
